

Release Notes for i>clicker and i>grader 5.4

i>clicker and i>grader 5.4.5 Win – March 22, 2010

i>clicker

- Fixed an issue that caused instructor remotes to advance two slides within PowerPoint when clicking the “Go Forward” (C) button on the instructor remote. This error was introduced in i>clicker version 5.4.4 and did not affect earlier versions.
- Fixed an issue that was preventing the response grid from updating correctly for clickers that have a remote ID beginning with the number 0.

i>grader

- Reduced the amount of time it takes to create a report using the Excel (CSV) export for General formatting.
- Added a progress bar to the Excel (CSV) export for General formatting.
- Fixed a run time error caused by changing the drive selection in the Save As dialog for General Excel (CSV) exports.

i>clicker and i>grader 5.4.4 Win/Mac – February 11, 2010

i>clicker

- i>clicker now checks that a minimum of 5MB of space is available in the iclicker Win folder when starting a polling session and returns an error message if insufficient space exists. (Win only)

i>grader

- Fixed an issue causing incorrect results in the Aggregate Performance, Participation, and Total columns and in the Individual Session Performance and Participation columns in the Excel (CSV) export for General formatting. This issue DID NOT affect the results in the Individual Session Total columns. Also the individual session data in i>grader, the HTML reports, and the Excel exports for course management systems were NOT affected. (Win only)
- Fixed an issue with Desire2Learn exports to support ‘#’ character in student id field in certain installations of D2L.
- Refined Synchronize Web Registrations functionality to accept i>clicker registrations in descending order (newest registrations first).
- Added a Save As option when exporting in the General format for i>grader.
- Added a confirmation message to overwrite already existing grade export file when exporting in General format.
- Added a warning message when trying to export grades from i>grader with UploadFile.csv open in another program (e.g., Excel).

- Added an Ignore All button for Synchronize Web Registrations. The Ignore All button allows you to ignore students that didn't register properly and fix the issue at a later time.
- Added a message box to display if a corrupt roster is found (instead of a run-time-error). (Mac only)
- Fixed an issue where using the tab key on the keyboard did not change the focus correctly in some i>grader screens. (Mac only)

i>clicker and i>grader 5.4.2 Mac – November 23, 2009

i>clicker

- i>clicker now runs at 1280 x 720 screen resolution, a standard for whiteboards.
- Changed i>clicker so that CMS integrate files can now be saved into the Resources folder instead of in the root directory.
- Added a Delete button to the Welcome to i>clicker screen. The Delete button makes it easy to delete classes.
- Fixed an issue where a correct answer appears in the Question Information window even when anonymous polling is selected.
- Fixed an issue where the title of the first question in the Question Information window was not editable.
- Fixed an issue where long course names were truncated in the General preferences Course Name field.
- Question numbers no longer reset when resuming a session using a questionlist.csv file.

i>grader

- Added a Select All option to the General export options.
- Fixed an issue in the Advanced Settings for Unregistered i>clicker(s) where users could not delete text in the Remote ID Containing field. Also, added an Exit button to the Unregistered i>clicker(s) Window.
- Students with apostrophes in their names now synchronize correctly.
- Students marked as absent are no longer given zeros in the upload file for course management systems.
- CMS integrate wizard is now launched by i>grader. Instructors no longer have to launch the CMS integrate wizard application by double-clicking on it.
- i>grader now requires that there are no duplicate student IDs in the course roster as this will cause problems with synchronization.
- Fixed an issue where designated correct answers would sometimes change when points were awarded for more than one correct answer.

i>clicker and i>grader 5.4.2 Win – November 10, 2009

i>clicker

- Tested i>clicker and i>grader for Windows 7 compatibility.

- Added an option to exit i>clicker if the base is unplugged while i>clicker is running.
- i>clicker now runs at 1280 x 720 screen resolution, a standard for whiteboards.
- Changed i>clicker so that CMS integrate files can now be saved into the Resources folder instead of in the root directory.
- Question numbers no longer reset when resuming a session using a questionlist.csv file.
- Selecting the right answer is now disabled while polling is active.
- Added support for decimal points in the Performance Point cap setting.
- Long course names are no longer truncated on the Main Menu screen.
- Leading zeros on clicker IDs now appear in the response grid.
- Instructors can now click "A" twice to start polling when the question information pop up window appears.

i>grader

- Students marked as absent are no longer given zeros in the upload file for course management systems.
- i>grader now requires that there are no duplicate student IDs in the course roster as this will cause problems with synchronization.
- CMS integrate wizard is now launched by i>grader. Instructors no longer have to launch the CMS integrate wizard application by double-clicking on it.
- Instructors can now scroll using the arrow key to view the entire course title on the Set Scores Screen.
- The number of students updated during web synchronization now matches the number of students in the course roster.
- Increased the number of digits in the Set Scores participation points field from three to five.
- Participation and Performance points headers no longer reverse in the General export.
- Students with apostrophes in their names now synchronize correctly.

i>clicker and i>grader 5.4.1 Mac – October 16, 2009

- Added i>clicker *integrate* support for Blackboard, Blackboard Enterprise (WebCT) Campus Edition and Vista, and ANGEL. *integrate* enables instructors to easily synchronize CMS student registrations into i>grader and export i>clicker scores back into the CMS gradebook in one click. In addition, *integrate* allows instructors to easily import CMS rosters into their i>clicker course folders and enables student registration within the CMS.
- Fixed an issue where clicking the i>clicker toolbar would cause PowerPoint and Keynote to exit out of slideshow mode.
- Fixed an issue where i>clicker students registering via Roll Call or Loan/Register were appearing as unregistered if the roster file was imported from Blackboard 8 or 9.
- Fixed an issue where students who included an apostrophe in their name when registering were not synchronizing correctly.

i>clicker and i>grader 5.4.1 – September 3, 2009

- New ability for administrators to set campus-specific preferences that will display to all instructors using i>clicker on that campus. This was an option available with i>clicker 5.3, but became more difficult to administer with the new classes structure in 5.4. Specifically, administrators using 5.4.1 can now establish a default course management system and enter a campus web/security code for locally hosted i>clicker registration that will be distributed to all faculty. (See the i>clicker Help for details.)
- Increased character limits on the course information screen. The new limits are now: Course Name - 50 characters, Course Number - 25 characters, Section Number - 25 characters.
- New required location for the i>clicker *integrate* files. The files should now be added to the root directory rather than each individual course folder, making it easier to use *integrate* across multiple classes. This change only affects i>clicker *integrate* users.
- New PC i>grader ability to interpret roster files downloaded from Blackboard Vista from both UNIX and Windows servers. Vista rosters from UNIX servers export in a different file format than Vista rosters exported from Windows servers; i>grader can now accept both.
- i>grader now includes the total session points possible when exporting for a course management system. This is a particularly crucial update for users of the ANGEL CMS gradebook.
- 5.4.1 i>grader default export format (using the General setting) is now backwards compatible and matches the export format of previous versions of i>clicker. (See the i>clicker Help for more details.)

i>clicker 5.4 – September 1, 2009

- New i>clicker and WebUpdate icons
- Much easier, more intuitive way to set up and use i>clicker for multiple classes. It is no longer necessary to make a separate copy of the MyCoursePC or MyCourseMac folder for each i>clicker course or section. A single copy of the new iclicker Win or i>clicker Mac folder now gives you access to all your courses and sections.
- New help system, available via the F1 key (in Windows) or whenever you see the  icon in the software (in Windows or Mac).
- Redesigned, more intuitive Settings/Preferences screens
- Support for Blackboard 9 in i>clicker (Settings/Preferences) and i>grader
- Support for Blackboard Enterprise Vista 8 in i>clicker (Settings/Preferences) and i>grader
- Support for new roster outputs required for ANGEL 7.2 and 7.3. Support for ANGEL 7.4 in i>clicker (Settings/Preferences) and i>grader
- More intuitive Loan Clickers approach (default choice is loan, not permanent, registration)
- Histogram colors redesigned using Color Universal Design, a design system developed in consideration of people with various types of color vision, to allow information to be accurately conveyed to as many individuals as possible.
- New i>clicker *integrate* support for Blackboard, Blackboard Enterprise (WebCT) Campus Edition and Vista, and ANGEL. *integrate* enables instructors to easily import CMS rosters into their i>clicker course folders and enables student registration within the CMS.

- Support for web>clicker beta testers (contact review@iclicker.com to request beta access)

i>grader 5.4 includes the following enhancements:

- New i>grader icon
- New export options enable professors to tease out participation and performance points as well as student data
- Support for Blackboard 9 in i>clicker (Settings/Preferences) and i>grader
- Support for Blackboard Enterprise Vista 8 in i>clicker (Settings/Preferences) and i>grader
- Support for new roster outputs required for ANGEL 7.2 and 7.3. Support for ANGEL 7.4 in i>clicker (Settings/Preferences) and i>grader
- New i>clicker *integrate* support for Blackboard, Blackboard Enterprise (WebCT) Campus Edition and Vista, and ANGEL. *integrate* enables instructors to easily synchronize CMS student registrations into i>grader and export i>clicker scores back into the CMS gradebook in one click. In addition, *integrate* allows instructors to easily import CMS rosters into their i>clicker course folders and enables student registration within the CMS.
- More intuitive voting legend in HTML reports (NV = No votes collected and AP = Anonymous Polling)
- Correction to rounding inaccuracies in the Term and Session Summary reports
- Additional fixes and efficiencies to the web synchronization process
