

Release Notes for i>clicker and i>grader version v6.1

i>clicker and i>grader v6.1.6 (Win/Mac) - October 2011

i>clicker

- Fixed an issue where negative exponents were not displaying correctly in the Results Chart (i.e., bar graph).
- Fixed an issue where windows that were moved to a secondary monitor did not reset their location when i>clicker was shut down.
- Fixed an issue where student names and IDs were not displaying in the correct order in Roll Call Registration. Student information now displays as Last Name, First Name, Student ID.
- Fixed an issue where i>clicker would stop responding when users run Roll Call Registration and then press "A" on the instructor remote.
- Fixed an issue where a Question on the Fly message box would not close properly.
- Fixed an issue where a confirmation window that appears when deleting a demographic question appeared behind the My Settings window.
- Fixed an issue where the Results Chart (bar graph) window would move from the primary monitor to the secondary monitor during a polling session.
- Fixed an issue where the correct answer could be changed using the instructor remote even when the Results Chart was not displayed.
- Improved slow roll call performance when running i>clicker from a flash drive.
- Fixed an issue where responses with large numbers were being truncated in the Results Chart window.
- Fixed an issue where every sixth student was being skipped in Roll Call Registration.
- Fixed an issue where roll call was occasionally not responding with one second remaining.
- Changed i>clicker so that you can advance slides while polling is open.
- Fixed an issue where clickers that were loaned for one session did not appear in the Response Grid or the Results Chart.
- Changed i>clicker so that you can run a roll call registration even when all students are registered. This makes it possible for students to unregister their remotes using roll call even after all students are registered.
- Fixed an issue where numeric answers were not available when resuming a session.
- Fixed an issue where the change frequency message for students was appearing behind a powerpoint presentation.
- Fixed an issue where the labels on the results chart were not turning green when selected as a correct answer.
- (Win Only) Fixed a window redraw issue when using Question on the Fly.
- (Mac Only) Fixed an issue where the My Settings window appeared behind PowerPoint 2011 when in presentation mode.
- (Mac Only) Fixed an issue where i>clicker was occasionally not recognizing bases on the same frequency when starting a session.

i>grader

- Changed i>grader so that when users manually change the answer point values in the Session Summary window the points do not revert back to the default values upon closing the Session Summary window.
- Fixed an issue where generating a report by remote ID was showing student IDs for unregistered students. Student IDs are no long shown on this report.
- Fixed an issue where student remote IDs beginning with a 3 were not synchronizing correctly in i>grader.
- Fixed an issue where answers with negative exponents were not displaying correctly in the i>grader Session Summary window.
- (Mac Only) Fixed an issue where i>grader would occasionally stop responding when users clicked on the blank area to the right of the session data columns to open the Session Summary window.

i>clicker and i>grader v6.1.5 (Win) - August 2011

i>clicker

- Fixes an issue where the i>clicker toolbar would occasionally lose focus and appear behind a PowerPoint presentation. This issue occurred infrequently but was most likely to happen when using the i>clicker instructor remote to close the Results Chart.

i>grader

- No changes.
