

iClicker v7.14 Gradebook Integration for Sakai

This package includes all the files necessary to deploy and administer iClicker's integration for your institution's Sakai server.

To deploy and administer iClicker v7.14's gradebook integration:

1. Install the Sakai plug-in to your institution's server. See the **README** file contained within the plug-in folder for step-by-step instructions.
2. Use the **LMS Admin Setup** utility for your operating system (Win/Mac) to generate an LMS configuration file, *LMS_Wizard.xml*. You only need to generate this file once as it will work with iClicker v7.14 on all operating systems (Win/Mac/Linux).
3. Place the *LMS_Wizard.xml* configuration in the **Resources** subfolder of a freshly downloaded version of iClicker v7.14. This creates a version of iClicker that is custom-configured to work with your Sakai server.
4. Compress the customized iClicker folder as a zip file.
5. Distribute the custom iClicker v7.14 package and **iC7.14 Sakai Instructor Guide** to your faculty.

Contact us at contact@iclicker.com for assistance with *Integrate* and LMS-related issues.
