

Integrating iClicker Classic with Sakai

Step 1: Generate iClicker Configuration Files

Generate the iClicker configuration file for your instructors. This will allow instructors to download their roster from Sakai into iClicker and upload grades from iClicker into Sakai.

- Launch the Admin Setup Utility (iclicker-lms-admin-setup application) from the Admin Setup folder.

Note: To download this file please go to the [iClicker Downloads page](#) and then scroll down to the "LMS Downloads for Administrators" section and choose whether you are downloading for Windows or Mac.

- Select Sakai from the drop-down menu on the opening screen and click the Next button.
- Enter the desired LMS Description.
- Check the box marked "Allow instructors to save their login credentials for automatic login" if you would like to allow instructors to save credentials. If this box is NOT checked, instructors will not see the option to save credentials from within iClicker Classic.
- Choose http or https and enter your Sakai URL.
- Mark whether you would like to configure for single sign-on.
- Enter username and password if necessary.
- If you would like to give instructors the ability to upload zero scores as zero (numeric value), check this option. Instructors may experience slower performance with this option enabled.
- Click Finish.
- A confirmation message will indicate that the information provided was successfully authenticated and the setup files are ready for distribution to your instructors.
- The LMS_Wizard.xml file should now be present in your iclicker-lms-admin-setup folder.

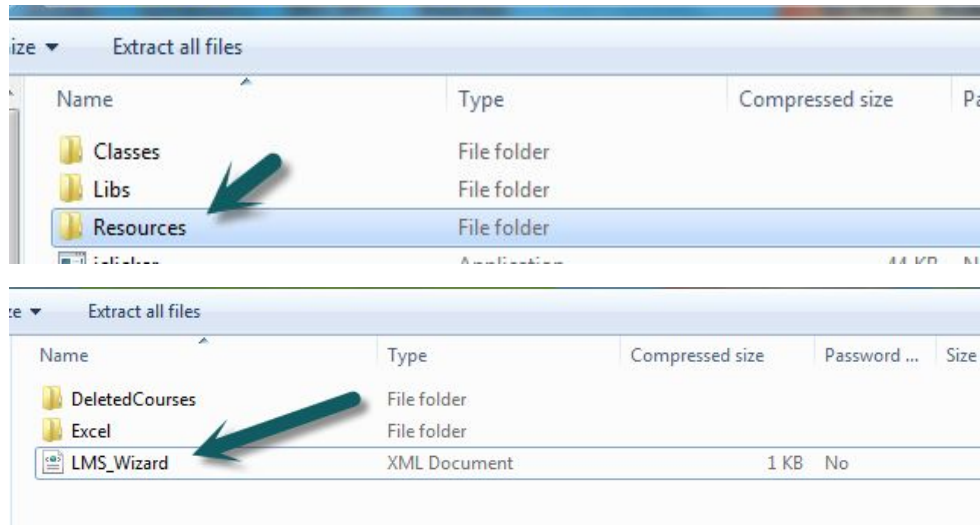

Note: You only need to generate this file once as it will work with iClicker v7.14 on all operating systems (Win/Mac/Linux).

Step 2: Package and Distribute the Configured Software

Place the configuration file generated in the previous step, LMS_Wizard.xml, in the Resources subfolder of the iClicker Classic application folder.

To generate the pre-configured iClicker Classic package for faculty:

- Download a fresh version of iClicker Classic for each OS you will make available to your faculty (Win/Mac/Linux).
- Place the configuration file generated from the LMS Admin Setup Utility, LMS_Wizard.xml, in the Resources subfolder of the iClicker Classic application folder. The same xml file works for all operating systems (Win/Mac/Linux). This creates a version of iClicker that is custom-configured to work with your Sakai server.

- Compress the customized iClicker folder as a zip file.
- Distribute the custom iClicker Classic v7.14 package and iClicker v7.14 Sakai Instructor Guide to your faculty.
